

Clinical Policy: Palivizumab (Synagis)

Reference Number: CP.PHAR.16

Effective Date: 08.01.09

Last Review Date: 05.25

Line of Business: Commercial, HIM, Medicaid

[Coding Implications](#)

[Revision Log](#)

See [Important Reminder](#) at the end of this policy for important regulatory and legal information.

Description

Palivizumab (Synagis[®]) is a recombinant humanized monoclonal antibody with anti-respiratory syncytial virus (RSV) activity.

FDA Approved Indication(s)

Synagis is indicated for the prevention of serious lower respiratory tract disease caused by RSV in pediatric patients:

- With a history of premature birth (less than or equal to 35 weeks gestational age) and who are 6 months of age or younger at the beginning of RSV season;
- With bronchopulmonary dysplasia (BPD) that required medical treatment within the previous 6 months and who are 24 months of age or younger at the beginning of RSV season;
- With hemodynamically significant congenital heart disease and who are 24 months of age or younger at the beginning of RSV season.

Limitation(s) of use: The safety and efficacy of Synagis have not been established for treatment of RSV disease.

Policy/Criteria

Provider must submit documentation (such as office chart notes, lab results or other clinical information) supporting that member has met all approval criteria.

It is the policy of health plans affiliated with Centene Corporation[®] that Synagis is **medically necessary** when the following criteria are met:

I. Initial Approval Criteria

A. Preterm Infant (must meet all):

1. Diagnosis of preterm infant with gestational age < 29 weeks;
2. Age at onset of RSV season < 12 months;
3. Request is for RSV prophylaxis;
4. Member must use Beyfortus[®], if available*, unless contraindicated or clinically significant adverse effects are experienced;
** Confirm supply constraints prior to bypassing this requirement (see Appendix D).*
5. Medical justification supports requests for RSV prophylaxis outside the identified season* duration for the specific region (*see Appendix D*);
**Requests for RSV prophylaxis outside of the typical season (e.g., September through May) by region may be considered. Traditionally RSV season onset was defined by consecutive weeks when RSV antigen-based tests exceeded 10% positivity. Due to the increased use of PCR testing, alternative statistical methods are used to determine seasonality in real time. Local and State health departments*

- should be consulted to determine the real-time RSV season. Additional information on RSV trends by state can be found by visiting: <https://www.cdc.gov/nrevss/php/dashboard/index.html>*
6. Member has not been hospitalized with RSV disease during the current RSV season;
 7. For the current RSV season, member has not previously received Beyfortus or other RSV monoclonal antibody or any RSV vaccine, including maternal RSV vaccination administered ≥ 14 days prior to delivery;
 8. Dose does not exceed 15 mg/kg once a month by intramuscular (IM) administration (*see Appendix E for dose rounding guidelines*).

Approval duration: up to 5 doses per RSV season*

** Overlap of two seasons due to elevated interseasonal RSV activity does not preclude a member from receiving more than 5 consecutive doses, so long as doses are limited to 5 per season*

B. Chronic Lung Disease of Prematurity (must meet all):

1. Diagnosis of chronic lung disease (CLD) of prematurity (i.e., BPD) defined as both of the following (a and b):
 - a. Gestational age < 32 weeks;
 - b. Requirement for $> 21\%$ oxygen for ≥ 28 days after birth;
2. Age at onset of RSV season (a or b):
 - a. Age < 12 months;
 - b. Age ≥ 12 months to < 24 months and continues to require supplemental oxygen, chronic corticosteroid therapy, bronchodilator therapy, or diuretic therapy within 6 months of the start of the RSV season;
3. Request is for RSV prophylaxis;
4. Member must use Beyfortus, if available*, unless contraindicated or clinically significant adverse effects are experienced;
** Confirm supply constraints prior to bypassing this requirement (see Appendix D).*
5. Medical justification supports requests for RSV prophylaxis outside the identified season* duration for the specific region (*see Appendix D*);
**Requests for RSV prophylaxis outside of the typical season (e.g., September through May) by region may be considered. Traditionally RSV season onset was defined by consecutive weeks when RSV antigen-based tests exceeded 10% positivity. Due to the increased use of PCR testing, alternative statistical methods are used to determine seasonality in real time. Local and State health departments should be consulted to determine the real-time RSV season. Additional information on RSV trends by state can be found by visiting: <https://www.cdc.gov/nrevss/php/dashboard/index.html>*
6. Member has not been hospitalized with RSV disease during the current RSV season;
7. For the current RSV season, member has not previously received Beyfortus or other RSV monoclonal antibody or any RSV vaccine, including maternal RSV vaccination;
8. Dose does not exceed 15 mg/kg once a month by IM administration (*see Appendix E for dose rounding guidelines*).

Approval duration: up to 5 doses per RSV season*

** Overlap of two seasons due to elevated interseasonal RSV activity does not preclude a member from receiving more than 5 consecutive doses, so long as doses are limited to 5 per season*

C. Congenital Heart Disease (must meet all):

1. Age and diagnosis at onset of RSV season (a or b):
 - a. Age < 12 months and either (i or ii);
 - i. Diagnosis of cyanotic heart disease and either (a or b):

- a) Receiving medication to control congestive heart failure AND will require a cardiac surgical procedure;
- b) Diagnosis of moderate to severe pulmonary hypertension;
- ii. Diagnosis of a cyanotic heart defect and RSV prophylaxis is recommended by a pediatric cardiologist;
- b. Age < 24 months and undergoing cardiac transplantation or cardio-pulmonary bypass during the current RSV season;
2. Request is for RSV prophylaxis;
3. Member must use Beyfortus, if available*, unless contraindicated or clinically significant adverse effects are experienced;
** Confirm supply constraints prior to bypassing this requirement (see Appendix D).*
4. Medical justification supports requests for RSV prophylaxis outside the identified season* duration for the specific region (*see Appendix D*);
**Requests for RSV prophylaxis outside of the typical season (e.g., September through May) by region may be considered. Traditionally RSV season onset was defined by consecutive weeks when RSV antigen-based tests exceeded 10% positivity. Due to the increased use of PCR testing, alternative statistical methods are used to determine seasonality in real time. Local and State health departments should be consulted to determine the real-time RSV season. Additional information on RSV trends by state can be found by visiting: <https://www.cdc.gov/nrevss/php/dashboard/index.html>*
5. Member has not been hospitalized with RSV disease during the current RSV season;
6. For the current RSV season, member has not previously received Beyfortus or other RSV monoclonal antibody or any RSV vaccine, including maternal RSV vaccination;
7. Dose does not exceed 15 mg/kg once a month by IM administration (*see Appendix E for dose rounding guidelines*).

Approval duration: up to 5 doses per RSV season (6 doses if cardio-pulmonary bypass)*

** Overlap of two seasons due to elevated interseasonal RSV activity does not preclude a member from receiving more than 5 consecutive doses, so long as doses are limited to 5 per season*

D. Anatomic Pulmonary Abnormalities, Neuromuscular Disorders, Infants Profoundly Immunocompromised (off-label) (must meet all):

1. Age and diagnosis at onset of RSV season (a or b):
 - a. Age < 12 months and diagnosis of an anatomic pulmonary abnormality or neuromuscular disorder that impairs the ability to clear secretions from the upper airway (e.g., due to ineffective cough);
 - b. Age < 24 months and will be profoundly immunocompromised during the RSV season (e.g., due to solid organ or hematopoietic stem cell transplantation, chemotherapy, severe combined immunodeficiency, chronic granulomatous disease);
2. Request is for RSV prophylaxis;
3. Member must use Beyfortus, if available*, unless contraindicated or clinically significant adverse effects are experienced;
** Confirm supply constraints prior to bypassing this requirement (see Appendix D).*
4. Medical justification supports requests for RSV prophylaxis outside the identified season* duration for the specific region (*see Appendix D*);
**Requests for RSV prophylaxis outside of the typical season (e.g., September through May) by region may be considered. Traditionally RSV season onset was defined by consecutive weeks when RSV antigen-based tests exceeded 10% positivity. Due to the increased use of PCR testing, alternative statistical methods are used to determine seasonality in real time. Local and State health departments*

- should be consulted to determine the real-time RSV season. Additional information on RSV trends by state can be found by visiting: <https://www.cdc.gov/nrevss/php/dashboard/index.html>*
5. Member has not been hospitalized with RSV disease during the current RSV season;
 6. For the current RSV season, member has not previously received Beyfortus or other RSV monoclonal antibody or any RSV vaccine, including maternal RSV vaccination;
 7. Dose does not exceed 15 mg/kg once a month by IM administration (*see Appendix E for dose rounding guidelines*).

Approval duration: up to 5 doses per RSV season*

** Overlap of two seasons due to elevated interseasonal RSV activity does not preclude a member from receiving more than 5 consecutive doses, so long as doses are limited to 5 per season*

E. Cystic Fibrosis (off-label) (must meet all):

1. Diagnosis of cystic fibrosis and one of the following (a or b):
 - a. Clinical evidence of nutritional compromise;
 - b. Diagnosis of CLD of prematurity defined as both of the following (i and ii):
 - i. Gestational age < 32 weeks;
 - ii. Requirement for > 21% oxygen for ≥ 28 days after birth;
2. Age at onset of RSV season (a or b):
 - a. Age < 12 months;
 - b. Age < 24 months and (i or ii):
 - i. Manifestations of severe lung disease (e.g., previous hospitalization for pulmonary exacerbation in the first year of life or abnormalities on chest radiography or chest computed tomography that persist when stable);
 - ii. Weight for length < 10th percentile;
3. Request is for RSV prophylaxis;
4. Member must use Beyfortus, if available*, unless contraindicated or clinically significant adverse effects are experienced;
** Confirm supply constraints prior to bypassing this requirement (see Appendix D).*
5. Medical justification supports requests for RSV prophylaxis outside the identified season* duration for the specific region (*see Appendix D*);
**Requests for RSV prophylaxis outside of the typical season (e.g., September through May) by region may be considered. Traditionally RSV season onset was defined by consecutive weeks when RSV antigen-based tests exceeded 10% positivity. Due to the increased use of PCR testing, alternative statistical methods are used to determine seasonality in real time. Local and State health departments should be consulted to determine the real-time RSV season. Additional information on RSV trends by state can be found by visiting: <https://www.cdc.gov/nrevss/php/dashboard/index.html>*
6. Member has not been hospitalized with RSV disease during the current RSV season;
7. For the current RSV season, member has not previously received Beyfortus or other RSV monoclonal antibody or any RSV vaccine, including maternal RSV vaccination;
8. Dose does not exceed 15 mg/kg once a month by IM administration (*see Appendix E for dose rounding guidelines*).

Approval duration: up to 5 doses per RSV season*

** Overlap of two seasons due to elevated interseasonal RSV activity does not preclude a member from receiving more than 5 consecutive doses, so long as doses are limited to 5 per season*

F. Alaska Native and Other American Indian Infants (off-label) (must meet all):

1. Medical director consultation is required for requests relating to Alaska native and other American Indian infants that fall outside the criteria outlined above;

2. Alaska native infants: Eligibility for prophylaxis may differ from the remainder of the U.S. on the basis of epidemiology of RSV in Alaska, particularly in remote regions where the burden of RSV disease is significantly greater than in the general U.S. population;
3. Other American Indian infants: Limited information is available concerning the burden of RSV disease among American Indian populations. However, special consideration may be prudent for Navajo and White Mountain Apache infants in the first year of life;
4. Request is for RSV prophylaxis;
5. Member must use Beyfortus, if available*, unless contraindicated or clinically significant adverse effects are experienced;
** Confirm supply constraints prior to bypassing this requirement (see Appendix D).*
6. Medical justification supports requests for RSV prophylaxis outside the identified season* duration for the specific region (*see Appendix D*);
**Requests for RSV prophylaxis outside of the typical season (e.g., September through May) by region may be considered. Traditionally RSV season onset was defined by consecutive weeks when RSV antigen-based tests exceeded 10% positivity. Due to the increased use of PCR testing, alternative statistical methods are used to determine seasonality in real time. Local and State health departments should be consulted to determine the real-time RSV season. Additional information on RSV trends by state can be found by visiting: <https://www.cdc.gov/nrevss/php/dashboard/index.html>*
7. Member has not been hospitalized with RSV disease during the current RSV season;
8. For the current RSV season, member has not previously received Beyfortus or other RSV monoclonal antibody or any RSV vaccine, including maternal RSV vaccination;
9. Dose does not exceed 15 mg/kg once a month by IM administration (*see Appendix E for dose rounding guidelines*).

Approval duration: up to 5 doses per RSV season*

** Overlap of two seasons due to elevated interseasonal RSV activity does not preclude a member from receiving more than 5 consecutive doses, so long as doses are limited to 5 per season*

G. Other diagnoses/indications (must meet 1 or 2):

1. If this drug has recently (within the last 6 months) undergone a label change (e.g., newly approved indication, age expansion, new dosing regimen) that is not yet reflected in this policy, refer to one of the following policies (a or b):
 - a. For drugs on the formulary (commercial, health insurance marketplace) or PDL (Medicaid), the no coverage criteria policy for the relevant line of business: CP.CPA.190 for commercial, HIM.PA.33 for health insurance marketplace, and CP.PMN.255 for Medicaid; or
 - b. For drugs NOT on the formulary (commercial, health insurance marketplace) or PDL (Medicaid), the non-formulary policy for the relevant line of business: CP.CPA.190 for commercial, HIM.PA.103 for health insurance marketplace, and CP.PMN.16 for Medicaid; or
2. If the requested use (e.g., diagnosis, age, dosing regimen) is NOT specifically listed under section III (Diagnoses/Indications for which coverage is NOT authorized) AND criterion 1 above does not apply, refer to the off-label use policy for the relevant line of business: CP.CPA.09 for commercial, HIM.PA.154 for health insurance marketplace, and CP.PMN.53 for Medicaid.

II. Continued Therapy

A. All Indications in Section I (must meet all):

1. Member meets one of the following (a or b):
 - a. Currently receiving medication via Centene benefit or member has previously met initial approval criteria;
 - b. Member is currently receiving medication and is enrolled in a state and product with continuity of care regulations (*refer to state specific addendums for CC.PHARM.03A and CC.PHARM.03B*);
2. Request is for RSV prophylaxis;
3. Member must use Beyfortus, if available*, unless contraindicated or clinically significant adverse effects are experienced;
** Confirm supply constraints prior to bypassing this requirement (see Appendix D).*
4. Member will not reach 24 months of age at the start of RSV season;
5. Medical justification supports requests for RSV prophylaxis outside the identified season* duration for the specific region (*see Appendix D*);
**Requests for RSV prophylaxis outside of the typical season (e.g., September through May) by region may be considered. Traditionally RSV season onset was defined by consecutive weeks when RSV antigen-based tests exceeded 10% positivity. Due to the increased use of PCR testing, alternative statistical methods are used to determine seasonality in real time. Local and State health departments should be consulted to determine the real-time RSV season. Additional information on RSV trends by state can be found by visiting: <https://www.cdc.gov/nrevss/php/dashboard/index.html>*
6. Member has not yet received 5 Synagis doses in the current RSV season (*6 doses if cardio-pulmonary bypass*);
7. Member has not been hospitalized with RSV disease during the current RSV season;
8. For the current RSV season, member has not previously received Beyfortus or other RSV monoclonal antibody or any RSV vaccine, including maternal RSV vaccination;
9. If request is for a dose increase, new dose does not exceed 15 mg/kg once a month by IM administration (*see Appendix E for dose rounding guidelines*).

Approval duration: up to 5 doses per RSV season (6 doses if cardio-pulmonary bypass)*

** Overlap of two seasons due to elevated interseasonal RSV activity does not preclude a member from receiving more than 5 consecutive doses, so long as doses are limited to 5 per season*

B. Other diagnoses/indications (must meet 1 or 2):

1. If this drug has recently (within the last 6 months) undergone a label change (e.g., newly approved indication, age expansion, new dosing regimen) that is not yet reflected in this policy, refer to one of the following policies (a or b):
 - a. For drugs on the formulary (commercial, health insurance marketplace) or PDL (Medicaid), the no coverage criteria policy for the relevant line of business: CP.CPA.190 for commercial, HIM.PA.33 for health insurance marketplace, and CP.PMN.255 for Medicaid; or
 - b. For drugs NOT on the formulary (commercial, health insurance marketplace) or PDL (Medicaid), the non-formulary policy for the relevant line of business: CP.CPA.190 for commercial, HIM.PA.103 for health insurance marketplace, and CP.PMN.16 for Medicaid; or
2. If the requested use (e.g., diagnosis, age, dosing regimen) is NOT specifically listed under section III (Diagnoses/Indications for which coverage is NOT authorized) AND criterion 1 above does not apply, refer to the off-label use policy for the relevant line

- Data from the Florida Department of Health (<http://www.floridahealth.gov/diseases-and-conditions/respiratory-syncytial-virus/>) may be used to determine the appropriate timing of Synagis prophylaxis across Florida's regions where RSV seasons may begin at different times throughout the year. However, despite Florida's variable region-specific RSV seasons, a maximum of 5 monthly Synagis doses should be adequate.⁴⁻⁷
- Traditionally, the RSV season was defined by consecutive weeks when RSV antigen-based tests exceeded 10% positivity; however, since 2008, laboratories have shifted away from antigen-based RSV testing, and since 2014 the majority of tests and RSV detections among consistently reporting laboratories are determined by polymerase chain reaction (PCR). The method that consistently captured the highest percentage of PCR detections for retrospectively characterizing RSV seasons was determined to be the retrospective slope 10 (RS10) method. This method uses a centered 5-week moving average of RSV detections normalized to a season peak of 1,000 detections. The season onset was defined as the second of 2 consecutive weeks when the slope, or normalized 5-week moving average of RSV detections between subsequent weeks, exceeded 10. The season offset was the last week when the standardized (normalized) detections exceeded the standardized detections at onset. The peak was the week with the most standardized detections. The season duration was the inclusive weeks between onset and offset. The RS10 method captures a high proportion of RSV PCR detections for retrospectively determining RSV seasonality, but cannot be used to determine seasonal onset and offset in real time, and can only be employed after the season ends. Alternative statistical methods, including the tenfold baseline or 3% threshold methods might be used to determine seasonality in real time or near real time.
- The updated 2024 guidance provided by the AAP states that while the timing of the onset and duration of RSV season may vary, nirsevimab may be administered from October through the end of March in most of the continental United States. The timing of the onset, peak, and decline of RSV activity vary geographically, and providers may adjust timing of administration based on guidance from public health authorities (eg, CDC, health departments) or regional medical centers. The CDC expects the RSV season to fall within normal seasonal patterns.
- ACIP and AAP 2024 recommendations for the use of nirsevimab state the following regarding palivizumab:
 - If palivizumab was administered initially for the season and < 5 doses were administered, the infant should receive 1 dose of nirsevimab. No further palivizumab should be administered.
 - If palivizumab was administered in season 1 and the child is eligible for RSV prophylaxis in season 2, the child should receive nirsevimab in season 2, if available. If nirsevimab is not available, palivizumab should be administered as previously recommended.
- AAP frequently asked questions regarding nirsevimab state that a shortage of nirsevimab is not expected this coming season. The AAP and CDC have been meeting regularly with the manufacturer to review the challenges from last season and plan for the 2024-2025 season. Nirsevimab is expected to be broadly available by October 1, 2024. The only instance when palivizumab should be administered is when nirsevimab is recommended but is not available and the patient is eligible to receive palivizumab.

Appendix E: Dose Rounding Guidelines

Weight-based Dose Range	Vial Quantity Recommendation
≤ 52.49 mg	1 vial of 50 mg/0.5 mL
52.5 mg – 104.99 mg	1 vial of 100 mg/1 mL
105 mg – 157.49 mg	1 vial of 50 mg/0.5 mL and 1 vial of 100 mg/1 mL
157.5 mg – 209.99 mg	2 vials of 100 mg/1 mL
210 mg – 262.49 mg	1 vial of 50 mg/0.5 mL and 2 vials of 100 mg/1 mL
262.5 mg – 314.99 mg	3 vials of 100 mg/1 mL

V. Dosage and Administration

Indication	Dosing Regimen	Maximum Dose
RSV prophylaxis in pediatric patients	15 mg/kg IM once a month	15 mg/kg/month; up to 5 doses per RSV season (1 extra dose if cardio-pulmonary bypass)

VI. Product Availability

Single-dose vials: 50 mg/0.5 mL, 100 mg/1 mL

Coding Implications

Codes referenced in this clinical policy are for informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage. Providers should reference the most up-to-date sources of professional coding guidance prior to the submission of claims for reimbursement of covered services.

HCPCS Codes	Description
90378	Respiratory syncytial virus, monoclonal antibody, recombinant, for intramuscular use, 50 mg, each
S9562	Home injectable therapy, palivizumab or other monoclonal antibody for rsv, including administrative services, professional pharmacy services, care coordination, and all necessary supplies and equipment (drugs and nursing visits coded separately), per diem

Reviews, Revisions, and Approvals	Date	P&T Approval Date
2Q 2021 annual review: per prescribing information, added requirement for continued therapy that member will not reach 24 months of age at the start of RSV season; revised reference to HIM off-label use policy from HIM.PHAR.21 to HIM.PA.154; references reviewed and updated.	02.17.21	05.21
Per the CDC, added clarification that requests outside of the typical regional RSV season may be considered due to elevated interseasonal activity and inability to anticipate the likely spread, peak, or duration of activity with any certainty.	07.06.21	
For CLD requests, clarified chronic corticosteroid does not need to be systemic.	10.20.21	
2Q 2022 annual review: no significant changes; Appendix D updated to include American Academy of Pediatrics (AAP) updated guidance for the 2021-2022 RSV season; references reviewed and updated.	02.21.22	05.22
Added clarification for approval duration with the following notation: “Overlap of two seasons due to elevated interseasonal RSV activity does not preclude a member from receiving more than 5 consecutive doses, so long as doses are limited to 5 per season.”	05.31.22	
Appendix D updated to include AAP updated guidance for the 2022-2023 RSV seasons; references reviewed and updated. Template changes applied to other diagnoses/indications and continued therapy section.	09.07.22	
2Q 2023 annual review: for CLD added bronchodilator therapy as an additional option to confirm appropriateness of therapy in the second year of life per AAP guidance; references reviewed and updated.	01.04.23	05.23

Reviews, Revisions, and Approvals	Date	P&T Approval Date
Added redirection to Beyfortus per ACIP and AAP recommendations; clarified requirement for medical justification for use “outside” the typical RSV season by allowing region-by-region identified RSV season; added the following requirement: “for the current RSV season, member has not previously received Beyfortus or other RSV monoclonal antibody or any RSV vaccine, including maternal RSV vaccination.”	10.26.23	11.23
2Q 2024 annual review: no significant changes; updated Appendix D with AAP recommendations in the context of a limited supply of nirsevimab; added the following notation to clarify Beyfortus redirection if available: “For the 2023-2024 RSV season, supply issues are anticipated. Confirm supply constraints prior to bypassing this requirement (see Appendix D).”; references reviewed and updated.	01.09.24	05.24
2Q 2025 annual review: for preterm infants added clarification regarding maternal vaccine exclusion if administered ≥ 14 days prior to delivery per ACIP/AAP recommendations; removed statement regarding redirection to Beyfortus “For the 2023-2024 RSV season, supply issues are anticipated” as the AAP states shortage of Beyfortus is not expected this coming season; removed statements referencing elevated interseasonal activity as per the CDC regular seasonal patterns are now expected; references reviewed and updated.	01.17.25	05.25

Important Reminder

This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. The Health Plan makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. “Health Plan” means a health plan that has adopted this clinical policy and that is operated or administered, in whole or in part, by Centene Management Company, LLC, or any of such health plan’s affiliates, as applicable.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions, and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable Health Plan-level administrative policies and procedures.

This clinical policy is effective as of the date determined by the Health Plan. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. The Health Plan retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment, or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members. This clinical policy is not intended to recommend treatment for members. Members should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom the Health Plan has no control or right of control. Providers are not agents or employees of the Health Plan.

This clinical policy is the property of the Health Plan. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members, and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, members and their representatives agree to be bound by such terms and conditions by providing services to members and/or submitting claims for payment for such services.

Note:

For Medicaid members, when state Medicaid coverage provisions conflict with the coverage provisions in this clinical policy, state Medicaid coverage provisions take precedence. Please refer to the state Medicaid manual for any coverage provisions pertaining to this clinical policy.
